

ACRE™ BY MODERN·MILL

DARK FINISHES INFORMATION SHEET

- ⇒ Any finish that uses a dark color (LRV under 55) requires a solar reflective coating. LRV ratings are typically not listed on the product, so for any middle ground coatings that an installer is unsure of, it is recommended to contact the manufacturer.
- ⇒ The solar reflective coatings recommended are as follows:
- **Aquasurtech**
This is an excellent coating both paint and finish, but needs to be ordered ahead of time online.
 - **PPG**
Their colorant 897 is the heat-reflective pigment you add to dark color finishes. This can be purchased or shipped from store in Fort Wayne, IN. Contact: Ph: 260-373-2373 | e-mail: paf9270@ppg.com
 - **Sherwin Williams IR Reflective**
They have limited colors in semi-solid and semi-transparent finishes, but this is the most convenient solar reflective to purchase as most stores will have various colors in stock. If not they can ship from a nearby store within 1-2 days.
- ⇒ Final note on any coating - a little goes a long way. ACRE will not absorb paint or stain like wood, so less coating is needed to finish the product.
