

# Arabian Instruction Sheet

## Parts List

- 1- Top routed Rail w/channel
- 1- Bottom rail routed w/channel
- 2- Top mounting brackets w/screws (regular section)
- 2- Bottom mounting brackets w/screws (regular section)
- 4- Step rail brackets w/screws (step section)
- Appropriate quantity of balusters provided

(Lay piece of cardboard on floor or ground before assembly)

## Installation Instructions:

**(Level Railing)** *Read These Instructions Carefully*

**Step 1:** To cut the railing so that there is an equal amount (approximate) removed from each side do the following.

Following these instructions will center the balusters within the posts.

**Step 1 (1).** Measure the distance between the posts for each section.

**Step 1 (2).** Subtract that amount plus  $\frac{1}{4}$ " from the length of the railing section.

**Step 1 (3).** Divide the result of **Step 1 (2)** by two.

**Step 1 (4).** Measure in from one end of the railing the amount of **Step 1 (3)** and remove (cut ) the excess.

**Step 1 (5).** From the cut at **Step 1 (4)** measure the amount of **Step 1 (1)** on the remaining railing and remove the excess.

**Note:** Pay attention to which side of the line (mark) that you cut on.

**Step #2:** Insert all balusters into bottom routed rail. Take top routed rail and line up balusters and insert 1 baluster at a time

Note: for ease of installation, angle rail on 20° angle

**Step #3:** Insert all mounting brackets over end of rails. Position section between posts. Place 2" blocks under section at each end. Fasten mounting brackets to posts with the flat head screws.

**Step #4:** Drill  $\frac{1}{4}$ " hole in side of mounting bracket for expansion and contraction and center the pan head screws to fasten the rails to the brackets.

## (Step Railing)

Same as Level Railing.
